

SLC-FSDO FAASTeam presents:

# **sUAS New Applications and Technology**

Unmanned Aircraft Systems are everywhere and are being used in recreational, industrial and military applications. Small and easy to use, they can be controlled by a remote control or programmed to autonomously create their own mission plan using their own artificial intelligence. This seminar will discuss a range of industries/careers; how they are using sUAS technology to autonomously map and inspect challenging inaccessible areas with/without GPS, and how they integrate into the national airspace system (NAS). There will also be a range of commercial industrial drones on static display with sensor payloads that are capable of Photogrammetry, Lidar, Thermography and Public safety; above ground or underground indoors or outdoors.

Attend this seminar if you are interested in learning more about a Career in Unmanned Aircraft related industries and/or want to become a Commercial Drone Pilot and/or want to learn more about how these drones are integrating into Industry and the National Airspace System (NAS).

**Directions:** Stay on Main Ave toward E 10th St  
Turn Right onto W 9th St.  
Turn left on Camino Del Rio
